

ICD Diagnosis and Procedure Coding Guidelines

Policy ID: POL-CODE-006 | Version: 1.0 | Effective: 2024-01-01

1. Purpose

This document defines the coding standards for diagnosis codes (ICD) and procedure codes (CPT) used in claim submissions. Incorrect or mismatched codes are a leading cause of claim denial. All billing teams must follow these guidelines.

2. Diagnosis Code (ICD) Reference

The following diagnosis codes are recognised in the system. Claims must use a valid code from this list. Missing or unrecognised diagnosis codes will result in denial.

Diagnosis Code	Description	Category	Expected Severity
D10	General Fever	Fever	Low
D20	Bone Fracture	Bone	Medium to High
D30	Neurological Condition	Neurology	Medium
D40	Cardiovascular Condition	Heart	Medium to High
D50	Metabolic / Diabetic	Diabetes	Medium to High
D60	Dermatological Condition	Skin	Low to Medium
D70	Respiratory Condition	Fever	Medium
D80	Musculoskeletal Condition	Bone	Medium

3. Procedure Code (CPT) Reference

The following procedure codes are valid for claim submission. Procedure code UNKNOWN is not a valid code and will result in automatic claim rejection.

Procedure Code	Description	Typical Cost Range	High Risk Flag
PROC1	General Consultation	Rs 3,000 - Rs 6,000	No
PROC2	Diagnostic Imaging	Rs 2,000 - Rs 8,000	No
PROC3	Surgical Procedure - Minor	Rs 6,000 - Rs 15,000	Yes
PROC4	Surgical Procedure - Major	Rs 15,000 - Rs 40,000	Yes

PROC5	Specialist Consultation	Rs 5,000 - Rs 25,000	Yes
PROC6	Physiotherapy / Rehabilitation	Rs 800 - Rs 3,000	No
UNKNOWN	Invalid / Missing Code	N/A	Auto-Reject

4. Diagnosis to Procedure Matching Rules

The diagnosis code must be clinically consistent with the procedure code billed. Mismatches between diagnosis and procedure are a primary reason for claim denial.

Diagnosis Code	Valid Procedure Codes	Invalid Combinations
D10 (Fever)	PROC1, PROC6	PROC3, PROC4
D20 (Bone)	PROC1, PROC2, PROC3	PROC6
D30 (Neurology)	PROC1, PROC2, PROC5	PROC3
D40 (Cardiovascular)	PROC1, PROC3, PROC4, PROC5	PROC6
D50 (Diabetes)	PROC1, PROC2, PROC5	PROC3, PROC4
D60 (Skin)	PROC1, PROC2, PROC6	PROC4

5. Coding Errors That Cause Denial

- procedure_code = UNKNOWN — claim rejected immediately, no ML evaluation performed.
- diagnosis_code is null or empty — claim rejected, diagnosis is mandatory.
- Procedure code not in the approved list — claim flagged for manual review.
- Diagnosis code and procedure code combination is clinically inconsistent — claim denied.
- Billed amount significantly exceeds the typical cost range for the procedure — flagged for audit.
- Severity score does not match the expected severity for the diagnosis code — reviewed.

6. Specialty and Diagnosis Consistency

The treating provider's specialty must be consistent with the diagnosis code. For example, a Cardiology provider should not be billing for D60 (Skin) without a documented referral or cross-specialty justification.

Specialty	Expected Diagnosis Codes	Flag if Outside
Cardiology	D40	Yes — requires referral note
Orthopedic	D20, D80	Yes — requires referral note

Neurology	D30	Yes — requires referral note
General	D10, D60, D70	No — general practice accepted
