

Insurance Claim Submission Rules

Policy ID: POL-INS-005 | Version: 1.0 | Effective: 2024-01-01

1. Purpose

This document defines the general rules and requirements for submitting healthcare insurance claims. All claims must comply with these rules before being accepted for adjudication. Non-compliant claims will be rejected or denied.

2. Mandatory Fields

Every claim submission must include the following fields. Claims with missing mandatory fields will be automatically rejected without review.

Rule	Condition	Action
claim_id	Must be unique and non-null	Reject if missing
patient_id	Must match registered patient record	Reject if missing
provider_id	Must be a registered provider	Reject if missing
diagnosis_code	Must be a valid non-empty code	Reject if missing
procedure_code	Must not be null or UNKNOWN	Reject if missing
billed_amount	Must be greater than zero	Reject if invalid
date	Must not be null or future date	Reject if invalid

3. Timely Filing Rules

Claims must be submitted within the defined filing window from the date of service. Late submissions will be denied regardless of clinical validity.

- Primary claims must be submitted within 90 days of the date of service.
- Resubmitted or corrected claims must be filed within 60 days of the original denial.
- Claims submitted after the filing window will be denied with reason code LATE-FILING.

4. Duplicate Claim Rules

A duplicate claim is defined as a claim submitted more than once for the same patient, provider, date of service, and procedure code. Duplicate claims are automatically denied.

- If an identical claim exists in the system, the new submission is flagged as duplicate.
- Corrected claims must include a correction indicator to avoid duplicate detection.
- Providers with a high duplicate submission rate will be flagged for audit.

5. Prior Authorization Rules

Certain procedures require prior authorization before the service is rendered. Claims for procedures requiring authorization will be denied if no valid authorization reference is present.

- High-cost procedures (billed_amount above category threshold) require prior authorization.
- Elective procedures in Cardiology and Orthopedic specialties require pre-approval.
- Authorization must be obtained before the date of service, not retrospectively.
- Claims without valid authorization will be denied with reason code NO-AUTH.

6. Coordination of Benefits

When a patient has multiple insurance plans, coordination of benefits rules apply. The primary insurer pays first. The secondary insurer covers remaining eligible amounts. Claims must indicate whether another payer is involved.

7. Claim Correction and Resubmission

- Denied claims may be corrected and resubmitted within 60 days of denial notice.
- Resubmitted claims must reference the original claim_id.
- Claims denied for rule failures must fix all flagged issues before resubmission.
- Claims denied for high billing must include itemized documentation on resubmission.
